CHANGES IN NAMES OF AMERICAN RHYNCHOTA
CHIEFLY EMESINAE.

BY W. L. McATEE AND J. R. MALLOCH.

Owing to the extreme and touching solicitude of certain of our contemporaries for the taxonomic welfare of groups of Hemiptera recently specialized upon by us, we deem it advisable to place on record the subjoined changes in nomenclature which otherwise would have been withheld until publication of comprehensive systematic treatises now well advanced.

EMESINAE.

Barce Uhler = **Metapterus** Costa.

Luteva Dohrn = **Ploiaria** Scopoli.

Ploiariopsis Champion = **Ploiaria** Scopoli.

Ploiaria carolina Banks not Herrich-Schäffer = **Ploiaria hirticornis** Banks.

Ploiariola Reuter = **Ploiariodes** White.

Ploiariodes californica Banks = **Ploiariodes rubromaculata** Blackburn.

Ploiariodes euryale Kirkaldy = **Ploiariodes rubromaculata** Blackburn.

Ploiaria maculata Haldeman = **Ploiariodes culiciformis** De Geer.

Ploiariodes errabunda Banks not Say = **Ploiariodes culiciformis** De Geer.

Ploiariodes tuberculata Banks = **Ploiariodes errabunda** Say.

Ploiariodes hirtipes Banks = **Ploiariodes vagabunda** Linnaeus var. **pilosa** Fieber.

Ploiariodes canadensis Parshley = **Ploiariodes vagabunda** Linnaeus var. **pilosa** Fieber.

Luteva arizonensis Banks is a **Stenolemus**.

Myiagreutes Bergroth is a subgenus of **Westermannias** Kirkaldy.

ISOMETOPIDAE.

Isometopus of American authors is not *Isometopus* of Fieber and we propose for it **Corticoris** new name. Genotype *Isometopus pulchellus* Heidemann.
